Key Advantages

- Rapid deployment
- Gifter White Label costs less and is more reliable than building an application from scratch
- 100% branded to your specifications
- State-of-the-art mobile technology on a stable platform
- Your customers carry your brand and store in their pocket 24/7
- Address book integration - one touch to select a shipping address, and billing information is autofilled
- Items load fast, even over EDGE

Gifter White Label

The situation: you want your ecommerce brand to have a strong presence on the iPhone, the largest potential mobile marketplace in the world. But who do you hire to build a world-class iPhone application?

Enter Gifter White Label by GLsoft.mobi.

Gifter White Label is a stable, state-of-the-art framework for building branded ecommerce applications on the iPhone. The Gifter platform has been in constant development since before the launch of the iPhone store and stress-tested by tens of thousands of real iPhone users. We work with you to custom-tailor a store application for your brand on top of that solid foundation with a focus on the interface, ease of use, and the checkout process. The end result is a mobile application that looks better, performs better, ships faster, and costs less than engaging freelancers to build an application from scratch ever could. If your ecommerce company wants to enter the iPhone marketplace, Gifter White Label can make it easier than you ever imagined.
